

SILRES® BS 1703 Empty Drum Disposal at Wacker Chemical Corporation

Note: Customers would be responsible for using their own licensed waste disposal and container recyclers for non-returnable containers.

This new substance is received by Wacker Chemical Corporation from Wacker Chemie AG in Composite "Bottle in Cage" IBC Containers. It is consumed in the production of branched vinyl silicone polymers. The empty containers are sent for cleaning and recycling or disposal (if damaged). Although we describe the containers as "RCRA Empty", due to the low viscosity of the new substance ($\approx 18 \text{ mm}^2/\text{s}$ @ 25°C) the amount of residual material is expected to be much less than that of a more viscous substance.

Also, based on the known properties of the substance, it would not be considered to meet RCRA Characteristic Hazardous Waste criteria.
